HELMET COATING

MADE IN GERMANY

► The Company

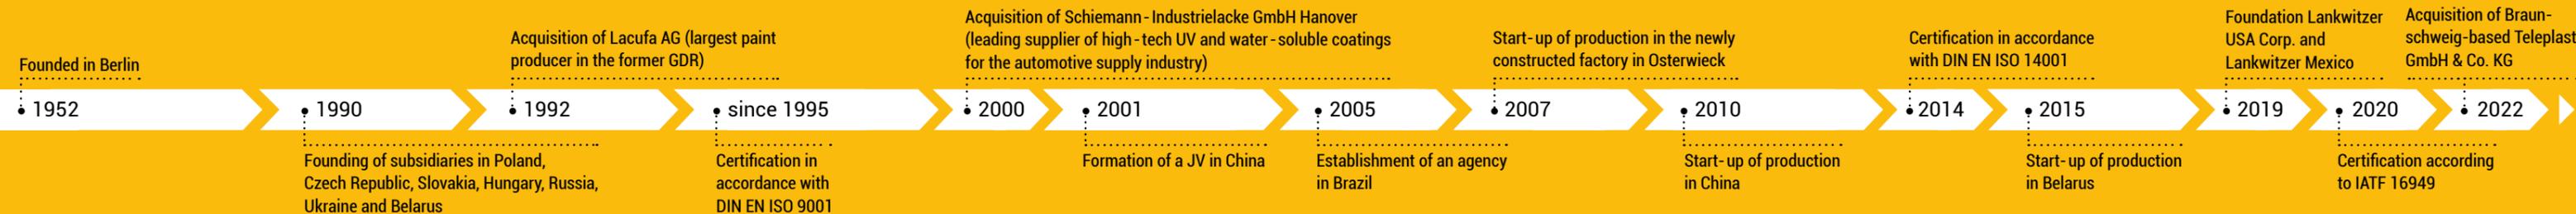

WORLDWIDE ACCLAIM, MADE IN GERMANY

Founded in 1952, LANKWITZER has established itself worldwide as a premium supplier of industrial coating systems. Lankwitzer's trademarks are top-class quality „Made in Germany“, a high degree of flexibility, outstanding innovative strength and a customer-driven mindset. The key to our success is the global availability of all our products and ongoing customer support provided by a highly-qualified team of developers and technicians.

The highest level of professionalism and a passion for our products ensure that we are a reliable partner for customers around the world as well as a leading manufacturer of cutting edge coating systems in the ACE (agricultural, construction and earth-moving equipment), railway, pipe, automotive and plastic packaging sectors.

As an owner-managed family enterprise, we operate independently, quickly, without hierarchical barriers – and take personal responsibility for our promises.

LANKWITZER PREMIUM COATINGS – PROTECTION IN PERFECTION

Uniformity or diversity, safety features such as day glow and luminescent paints or sporty trend colours, matte or high gloss – we open up new horizons in the helmet industry. Your customers like it colourful? We live and love this passion every day. LANKWITZER is an agile partner with customised solutions that you and your customers demand. Benefit from our experience and the innovative power of our development specialists. We will develop industry-specific surface solutions for you, closely matched to the requirements of your market and current lifestyle trends.

Integrated package solutions for you:

- Colour shade creation (solid, metallic or mica colour shades)
- Innovative and functional surfaces (afterglow effects)
- Excellent service
- High flexibility
- Short delivery times

We have the solution

- 100 % solid & UHS UV-coatings
- Hydro basecoats & UV-hydro-coatings
- S/B basecoats & S/B-PU-coatings

SAVE OUR ENVIRONMENT

Developing innovative systems to protect people and the environment, as well as using energy efficiently are key future issues that LANKWITZER is already addressing successfully right now. We develop and produce ecologically and economically worthwhile system solutions for our customers.

With this in mind, we raise our employees' awareness of the need to constantly improve environmental protection. LANKWITZER develops, produces and sells products and systems that meet current environmental requirements in terms of production and use. We inform our customers about the environmental aspects of our products, just as we take environmental criteria into account when selecting suppliers.

We take environmental pollution of any kind seriously. We take extensive measures to prevent production-related emissions. These are strictly monitored at all sites. At the same time, we review all environmental impacts as early as the planning phase of new activities, new products and processes.

► Products

PRODUCTS

► PAINT SYSTEMS FOR FIREFIGHTER HELMETS ...

... must satisfy many requirements. The helmet system has a significant impact on the firefighter's protection while they are pursuing their highly responsible profession. Protecting against flames and heat is an essential function of the helmet. The helmet only achieves this protection if the paint system applied has flame-retardant properties. LANKWITZER is a specialist for such flame-retardant paint structures and is also able to meet the colour requirements of fire services, such as luminescent or day glow paints, etc.

▲ MILITARY HELMETS ...

not only meet many technical requirements of the armed forces (e.g. ballistic protection, attachment of auxiliary equipment, etc.) but their surfaces must also be robust and IR-reflective. A large number of helmet models have already been provided with LANKWITZER Premium Coatings.

► MOTORCYCLE AND SPORTS HELMETS ...

... not only protect the lives of their wearers; in addition to excellent visual requirements, they must also demonstrate high resistance and easy-to-clean properties. Our basecoats work on both thermoplastic and pre-primed composite helmet shells. Our UV-curing clear lacquers are exceptionally brilliant and low in VOCs.

◀ POLICE HELMETS ...

... must withstand extreme loads and, in addition, have flame-retardant properties. Almost all tactical helmets used by German police units are coated with LANKWITZER Premium Coatings and demonstrate their performance day after day.

We have a large number of locations worldwide that stand out due to their infrastructure and the high technical standard of our service and sales teams. Direct networking between the employees of all our subsidiaries drives forward our developments and ensures fast order processing. Our company's success is built on these firm foundations.
